ABSTRACT

The present invention relates to novel cytoplasmic tyrosine kinases isolated from megakaryocytes (megakaryocyte kinases or MKKs) which
5 are involved in cellular signal transduction pathways and to the use of these novel proteins in the diagnosis and treatment of disease.↑

12 The present invention further relates to specific megakaryocyte kinases, designated MKK1, MKK2 and MKK3,
10 and their use as diagnostic and therapeutic agents.
